

Beyond the Dawn Rules Primer

GAME FLOW

1. Pre-game actions
2. Beginning of round events
3. Each unit may take a move, attack, and ability action. They may take any, but if activated must take at least one. Alternate turns until all models are exhausted or unable to take actions. As an action, you may choose to exhaust a unit for the remainder of the round. Players may not skip a turn and must spend at least one AP on actions.
4. End of round events
5. Objective control is checked
6. Points are accumulated
7. Repeat until 5 rounds are complete
8. Battle end
 - a. End of game events
 - i. Score/victory calculation

Movement

Moving a unit costs the unit's MC (Movement Cost) per 1 inch of movement.

Penalties

There are two types of penalties incurred: Movement and Attack Penalties. For each level of a penalty, the cost of the associated action is increased by 50% of the unit's AC/MC respectively. A unit may expend a point of Focus to ignore a single penalty level for one action. Here a few examples of what incurs a penalty, but these are not the only sources of penalties.

- MP: Difficult terrain (per-inch of terrain)
- AP/MP: Avoiding an Opportunity Attack
- AP/MP: $\leq 25\%$ Wounds
- AP: Gain a point of Armor Penetration
- AP: Shooting something behind cover or attacking through an allied model

Taking a turn

You declare the series of actions you wish to take and sum up the total Activation Point cost all the actions the unit is taking. If the total cost is not an integer, round it. Once the cost is paid from the unit's Activation Points, the actions are carried out in the sequence specified. Each unit has 12 Activation Points which refresh at the start of each round.

Resolving Combat

Each attack costs Activation Points equal to the attacker's AC (Attack Cost). You may take make multiple attacks in the same attack action, provided they are against the same target. Combat damage is calculated on a per-attack basis by subtracting the attacking unit's Toughness from the attacking unit's Power (this cannot be lower than 1). Then subtract the defending unit's Armor from the resultant number. Subtract the total from the defending unit's wounds.

$$P^A - T^D - A^D = \text{Damage}$$

Force Composition

Each team is 100 points. Players may play with a 300-point roster and select 100 after determining mission.

Setup

A 36"x36" play area is recommended but adjust as necessary. For each additional player beyond the second, 6" on each side is recommended.

Beyond the Dawn Rules Primer

ABILITIES

Flying

This unit may ignore terrain and enemy models when moving (provided that there is room for the model to fly. IE: No flying over walls inside enclosed terrain)

Multi-Attack

This unit may attack multiple targets within the same Attack Action

Dauntless X

This unit may ignore up to X simultaneous Attack Penalties

Relentless X

This unit may ignore up to X simultaneous Movement Penalties

Cleave

When attacking, choose a direction. If one of your attacks kills an enemy unit and you have surplus damage to assign, you may immediately attack the next unit in that direction once with an attack whose base Power is equal to the unassigned damage.

True Damage X

This unit always deals at least X damage or its Power, whichever is lower.

Burrow

Spend X amount of Activation Points. Mark the unit's position and remove it from the table. This retires the unit for the round. As long as this unit remains burrowed, at the beginning of each subsequent round, you may place this model on the table within $(X/Y) + ((12/Y)*Z)$ inches of its starting position. X is the amount of initial Activation Points spent, Y is the unit's Movement Cost, and Z is the amount of turns that both began and ended with the unit burrowed since it last burrowed or was deployed burrowed in reserve. If a unit with Burrow is deployed in reserve, it may start burrowed. In this case, treat X as 0. (Shorthand: You may place it the amount it could have moved had it spent the points on movement the entire time it was Burrowed.)

Dodge

Attacking this unit imposes one Attack Penalty on the attacker.

Regeneration X

At the end of the round, restore X Wounds to this unit.

Seed X

When rooted, the unit may spend Activation Points as an action. After X points are spent, choose whether or not to grant the Seed ability to the new unit. If you do, then this unit loses this ability. At the end of the round, create a new unit within 6 inches of this unit. You may create any type of Plant unit within the same Root Network as this unit.

Root

This unit may root itself into the ground. While doing so, it gains Regeneration 1, +1 Toughness, and +1 to its attack range. While rooted, the unit cannot move. A unit may use this ability once per turn, unless otherwise specified. Units may not be rooted closer than 1" to any other rooted unit.

Enhanced Burrow

Functions the same as Burrow, but treat the unit's Movement Cost as being half of what it is when Burrowed. If the unit charged the turn it unburrows and it kills its target, it may reburrow during a Movement Action taken within the same Activation by spending three Activation Points in addition to the points spent on the Burrow action. These three points do not count towards the available movement for this Burrow.

Beyond the Dawn Rules Primer

Reshape X

The unit is malleable and can be recreated and changed by other units. X represents the current level. For each level of Reshape beyond the first, increase its Toughness, Power, Focus, and Damage by 1; Increase its Wounds and Activation Points by 2; decrease its Attack Cost by 0.1; increase its Pound of Flesh level by 1. For every two levels of Reshape decrease the model's Move Cost by 0.1. For every three levels, increase the base size. (28mm -> 40mm -> 60mm)

Spore Cloud (X)

Releases a cloud of basic spores that fills an area of radius X (2 if not provided) for 2 turns. Each enemy unit that ends its turn within the cloud either becomes infected with the specific Spore type, or adds a counter to an existing Spore infection. If no enemy units are infected with this cloud after the 2 turns, then return the unit to the battlefield at full Wounds.

Toxin Spores

At the end of the units turn, it takes 1D per stack of Toxin Spores. This cannot be mitigated via armor

Crippling Spores

While infected, the unit gains one of the following per stack: -1 Toughness, -1 Activation Points, Power; +0.4 Atk Cost, +0.4 Move cost.

Brain Spores

When the amount of stacks meets or exceeds the units Toughness, it permanently changes to the control of the infecting player

Spawning Spores

When the unit dies, create a number of Shroomin Grunts equal to the number of stacks on it. These must be placed within 2" of the dying model

Summon Spores

Creates a spore cloud at a location, or adds 3 rounds to an existing cloud while increasing its radius by 2 inches

Breakaway Spores

When the Spore Colony takes damage, for every 3 damage received from a single Attack, (NOT Attack Action) you may generate a Spore Cloud within 3 inches of the Spore Colony that has two counters on it. If this is not absorbed, create a Grunt upon dissolution of the cloud

Hydra Spores

When the Hydra dies, create an additional Spore Cloud within 3 inches of the model. Both clouds have a single counter on them, and will reform a Hydra if not absorbed
